Applications of genomic data and genetic tests

The Genome Industry Special Interest Group of Healthtech Finland is a community of Finnish health tech companies. It aims to accelerate the production and application of genomic data.

Objectives

- Growth in turnover and export to be an indicator when evaluating public procurements
- The technologies developed by the companies to be included in public services solutions
- Companies to be seen as desired collaboration partners in public procurements
- Competition to be fair for both private and public companies
- The service solutions for genetics developed and tested on the Finnish market are applicable to the international market, as well.

Market

There is no correct dose for a drug, there is a correct dose for a patient

7 %

of FDA drugs

18 %

of US prescriptions
